

POWER MARKET COMPLIANCE SERVICES

Power plant owners and stakeholders often overlook the need to get their FERC, EIA and ISO market compliance programs established early – during construction and precommissioning – to avoid possible delays and penalties that can affect their startup and commissioning schedule.

NAES can help get it done on time and done right the first time. We offer comprehensive FERC compliance management and oversight on an annual basis that includes U.S. Energy Information Administration (EIA) reporting as well as ISO market compliance.

Electric Quarterly Reporting (EQR):

Provide EQR reporting that summarizes contractual terms and conditions in agreements for jurisdictional services, including cost-based sales, market-based rate sales and transaction information for short- and long-term market-based power sales and cost-based power sales.

Qualifying Facilities (QF) Monitoring:

Assist with monitoring and complying with FERC's QF requirements: collect technical criteria data for qualifying small power production facilities; collect criteria for qualifying cogeneration facilities; and conduct a procedural review for obtaining QF status.

ISO Market Compliance: Monitor RTO queue process; review interconnection compliance requirements during construction, pre-commercial testing and post-commercial tracking; review strategies for bidding into energy market; manage fuel cost policies; monitor ISO notifications of current market conditions; coordinate compliance between the ISO, plant and energy manager.

International Swaps and Derivatives Association (ISDA) Agreement

Coordination: Serve as project management interface among all parties for execution of hedging documents, including document review and coordination of meetings.

EIA Reporting: Collect and manage data on status of existing electric generating plants and those scheduled for commercial operation (Form 860); and on energy source consumption, amount of power generated and cost of fuel receipts for regulated and non-regulated plants (Form 923).

Compliance Policies, Procedures and Anti-Market Manipulation Training:

Provide policies that address FERC elements of compliance programs including the role of senior management; effective preventive measures to ensure compliance; prompt detection, cessation and reporting of violations; and remediation efforts.

Energy Management Agreement (EMA) Coordination:

Assist with contract optimization and assurance of compliance roles related to real-time/day-ahead responsibilities; manage EMA amendments, adherence to RTO tariff and NERC standards, NERC GADS reporting, fuel options, settlements reporting and market monitor interface.
